

## Assignment: Console Application – Student Information Input & Display

### Objective:

Create a C# Console Application that allows a user to input basic student information and then displays it back on the screen. After successful implementation, push the project to your GitHub repository.

### Requirements:

- Create a new Console Application in Visual Studio.
- Ask the user to input the following details:
  - Student Name
  - Roll Number
  - Age
  - Course
- Store the entered details in appropriate variables or a class.
- Display the entered information in a clean, formatted manner.
- Push the completed project to GitHub.

### Extra:

- Add validation (e.g., age must be a number).
- Allow entering multiple students and display all records.
